THE INTERNATIONAL SPACE STATION (ISS) HISTORY AND COLORING PAGE

The idea for the International Space Station (ISS) started in 1984 when President Reagan approved the project. NASA began working with other countries to build the ISS. Canada, Japan, and many European countries joined the effort early on. In 1993, Russia also became a partner.

The actual construction of the ISS began in 1998. Pieces of the station were built in the US, Canada, Japan, and Europe and then sent into space to be assembled.

Today, the ISS is a joint project of five space agencies: NASA (USA), Roscosmos (Russia), ESA (Europe), JAXA (Japan), and CSA (Canada). Astronauts from all these countries live and work on the ISS, conducting experiments to learn more about space and how it affects humans. The ISS helps scientists learn things that can benefit life on Earth and prepare for future space missions.

Color the picture of the ISS below.
